## West Sliver, Paisano Floodplain Assessment Area and Paisano Drive

### Introduction

As described in the Response Action Plan (RAP Worksheet 1.0 pages 4, 15, 39 and Appendix 2-3; Arcadis 2016e), a parcel of land located along the west side of Paisano Drive across from the Plant Entrance Assessment Area (Plant Entrance AA) and South Terrace AA is referred to as the “West Sliver, Paisano” or “West Paisano Sliver”. Like several areas in the Floodplain AA, some areas on this sliver parcel have been impacted by historical deposition from stack and operations without evidence of migration to groundwater.

### Response Action

The RAP describes the status of this parcel. Results of soil sampling do not exceed the PCLs for metals in residential soil. TCT has implemented institutional controls, establishing a plume management zone (Soil RACR Attachment 2A) and restriction to commercial/industrial land use (RAP Figure 8). This Response Action is complete.
