

Paul M. Rose, P.E.

Consulting Structural Engineer since 1985. Project experience covers a wide spectrum of building types, structures, and materials. Building types include warehouse, industrial, mid-rise office, performance arts, schools, and corporate offices. Non-building structures include refinery structures, pedestrian bridges, and special drainage structures. Conducted investigations on damaged and collapsed structures. Evaluated structures for explosive demolition design. Structural materials include steel, concrete, masonry, and wood.
