Top-Seal White™ ~Liquid Base Stabilizer & Sealant

Top-Seal White is an all-purpose liquid soil stabilizer and additive that binds and transforms the base into a solid, yet flexible mass that resists fracturing. It prevents base failure, dust pollution and soil erosion, and it increases soil strength and reduces its permeability.

Field-testing with the Texas Department of Transportation has revealed that Top-Seal White's strength is comparable to that of cement stabilization. Other tests have shown that its resistance to moisture significantly exceeds Environmental Protection Agency standards.

Top-Seal White is a polymer-based emulsion that requires water dilution. It is non-petroleum-based and eco-friendly, evaporating only water during the curing process and emitting no volatile organic compounds (VOCs). It does not contain solvents or cause damage to roads or vehicles. It is easily applied, requiring no special equipment or handling procedures.

South Africa Project - Terra Pave International

Main Applications

Aircraft Runways

Hydroseed & Hydromulch Tackifier

Base Stabilization

Landfill Capping & Reclamation

BMX Tracks

Livestock

Bunker Liners

Military Convoy & Tank Trails

Cart Paths

Mine Tailings Capping & Reclamation

Coal Rail Car Capping

Odor & Vapor Suppression

Driveways

Parking Lots

Farms & Ranches

Roads

Foundations

Shoulders

Golf Courses

Slope Erosion Control

Hazardous Material Capping & Sealing

Temporary Roads & Detours

Heavy Haul Roads & Mining Roads

Walking Trails & Paths

Helicopter Landing Pads

Water Retention Basins & Pond Linings

Horse Farms & Arenas
